

# Akshay Gadekar

Team Lead • React & Node.js Developer • AWS • Remote U.S. Experience

As a Team Lead and Senior Full Stack Developer (MERN + AWS) with 5 years of experience, I specialize in building fast, scalable web applications using React, Node.js, and serverless AWS services. As a self-taught developer, my skills span the full stack — including Next.js, TypeScript, Material UI, SASS/CSS, and Laravel (PHP) — along with backend architecture, database design, and microservice-driven systems.

NODEJS EXPRESS

MONGODB MYSQL

AWS SERVERLESS

AWS COGNITO

MATERIAL UI

BOOTSTRAP

HTML5-CSS3-SAAS

REDUX

REACT TESTING LIB

LARAVEL

APOLLO GRAPHQL

GIT

MICROSERVICES

## WORK EXPERIENCE

### Senior React Developer (Remote, U.S. Client – Phone.com)

Phone.com (Employed by: Ecosmob Technologies Pvt. Ltd.)

09/2023 - Present

#### Responsibilities

- Selected as the sole developer from Ecosmob to work full-time with Phone.com, a U.S.-based VoIP SaaS product company, after clearing multi-step technical interviews; only developer from Ecosmob to pass and be retained for long-term collaboration.
- Built scalable, reusable UI components using React, Material UI, and core CSS — implemented advanced React patterns (custom hooks, Context API), maintained a monorepo for shared libraries, and optimized performance with lazy loading, memoization, and bundle splitting.
- Achieved 90%+ test coverage with Jest and React Testing Library, reducing regression bugs by 70%.
- Integrated REST APIs with robust error handling and UX fallback states.
- Actively participate in U.S. sprint planning, daily standups, and client reviews; consistently rated 4+ in quarterly performance evaluations.

### Team Lead

Ecosmob Technologies Pvt. Ltd.

08/2020 - 08/2023

#### Responsibilities

- Promoted to Team Lead based on technical performance and delivery ownership.
- Led a team of 3–5 developers, conducted code reviews, and managed cross-functional projects.
- Delivered 3+ full stack production applications using MERN, AWS, and microservices architecture — all launched on time with minimal post-release bugs under my leadership.
- Responsible for backend API design, scalable deployment using NGINX, and production debugging.
- Designed and deployed serverless components on AWS (Cognito, Lambda, API Gateway, S3) for authentication and automation workflows.
- Contributed to company growth through mentorship and internal training.

## PROJECTS

### IVR Flow

- Successfully tackled the complexities of creating a drag & drop Interactive Voice Response (IVR) flow, employing the React Flow library. Shared the comprehensive solution by publishing the code for reference and guidance. Repo: <https://github.com/AkshayGadekar/React-IVR-Flow>

### Node-Express-Sequelize-Boilerplate

- A starter project for quickly building RESTful APIs using Node.js, Express, and Sequelize. Repo: <https://github.com/AkshayGadekar/Node-Express-Sequelize-Boilerplate>

### AWS Cognito Authentication Service (Serverless)

- Built a fully serverless authentication system using AWS Cognito, Lambda, API Gateway, and S3 with Node.js and Serverless Framework. Repo: <https://github.com/AkshayGadekar/aws-cognito>

### Bulk Export CSV Library

- Engineered a Laravel-based library to enable the seamless export of large-scale data into CSV format, providing unlimited data export capabilities. Repo: <https://github.com/AkshayGadekar/bulkExportCSV>

### React Mui Hook Library

- Released a custom hook as a library for React MUI V5, to streamline component styling by seamlessly connecting stylesheets through the SX prop. Repo: <https://github.com/AkshayGadekar/useStylesHook>
